

XR Extended Reality

Umbrella term that encompasses all forms of immersive technologies that combine the physical and virtual worlds.

AR Augmented Reality

Overlays digital information on to the real world (images, videos, 3D models), typically through devices like smartphones, tablets or AR glasses.

MR Mixed Reality

Combines elements of both AR and VR, allowing digital objects to interact with the physical world in real-time. It requires technology which can understand and map the environment to blend virtual and real elements seamlessly.

VR Virtual Reality

Immerses users in a fully virtual environment, often through the use of VR headsets. Users are completely surrounded by the digital environment, which can be a simulation of the real world or a completely fictional universe.
